DOCKET NO.:	20862.B.NP	

DECLARATION OF PETER COYNE
UNDER 37 C.F.R. § 1.132

Mail Stop RCE
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

I, Peter Coyne, declare as follows:

1. I am the president and founder of P. Coyne Sales Associates, independent sales representatives for dental laboratory manufacturers. I have 31 years of experience in the dental casting industry.
2. I am making this declaration in support of patentability of the above-referenced patent application.
3. I have recently reviewed pending U.S. Patent Application No. 10/606,866, including

the currently pending claims filed with the U.S. Patent and Trademark Office on February 25, 2005, which were rejected in the Office Action mailed by the U.S. Patent and Trademark Office on May 10, 2005.

4. I have recently reviewed the Office Action of May 10th, including the references cited therein: U.S. Patent No. 5,466,152 ("Walter"); U.S. Patent No. 5,403,185 ("Presswood"); and U.S. Patent No. 5,788,489 ("Huffman").

5. I am familiar with the system covered by the currently pending claims of the above-referenced application.

6. As a person having over 31 years of experience in the dental casting industry, it is my opinion that it would not be obvious to one having ordinary skill in the art to provide the device disclosed in the Walter or Huffman patents with the membrane shown in the Presswood patent, as alleged by the Examiner in the Office Action of May 10th.

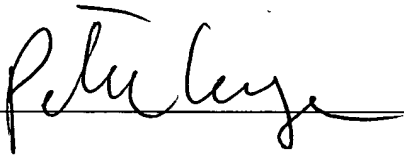

7. It has been my experience that resisting dental casting material from entering registration pin holes during the dental model casting process has remained problematic in the industry, even since the issuance of the Presswood patent, over ten years ago. The problem of dental casting material entering pin holes has persisted, despite the teachings of Presswood, further indicating to me that it has not been obvious for one skilled in the art to provide a membrane as taught with Presswood with a modeling method as taught in the Walter patent or the Huffman patent.

8. In my 31 years of experience in the dental casting industry, I have not seen a system for forming a dental model in which a membrane is used during preparation of a prepped tooth using dental casting material with a registration pin maintained in a registration pin hole

through the membrane while the model of the prepped tooth is formed.

9. I declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful, false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful, false statement may jeopardize the validity of any reexamination certificate issuing on the above-identified proceeding.

DATED this 8 day of August, 2005.

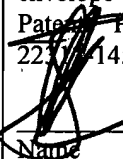

Peter Coyne
